Student Name: Mannat Gupta UID: 22BCS15281

Branch: BE-CSE Section/Group: 620-A

Semester: 5th Date of Performance: 27/12/24

1. Create a binary tree with elements [1, 2, 3, 4, 5, null, 6]

```
#include <iostream>
using namespace std;
struct TreeNode {
  int val;
  TreeNode* left;
  TreeNode* right;
  TreeNode(int x) : val(x), left(nullptr), right(nullptr) {}
};
TreeNode* createBinaryTree() {
  TreeNode* root = new TreeNode(1);
  root->left = new TreeNode(2);
  root->right = new TreeNode(3);
  root->left->left = new TreeNode(4);
  root->left->right = new TreeNode(5);
  root->right->right = new TreeNode(6);
  return root;
int height(TreeNode* root) {
  if (!root) return 0;
  return 1 + max(height(root->left), height(root->right));
void printLevel(TreeNode* root, int level) {
  if (!root) {
    cout << "null ";</pre>
    return;
  if (level == 1) {
     cout << root->val << " ";
  \} else if (level > 1) {
    printLevel(root->left, level - 1);
    printLevel(root->right, level - 1);
  }
void levelOrderTraversal(TreeNode* root) {
  int h = height(root);
```

CU CHANDIGARH IINIVERSITY

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

```
Discover. Learn. Empower.
  for (int i = 1; i <= h; i++) {
     printLevel(root, i);
  }
  cout << endl;
}

int main() {
    TreeNode* root = createBinaryTree();
    cout << "Level-order traversal of the binary tree: ";
    levelOrderTraversal(root);
    return 0;
}</pre>
```

```
Output

Level-order traversal of the binary tree: 1 2 3 4 5 null 6

=== Code Execution Successful ===
```

2. Check the binary tree is symmetric or not

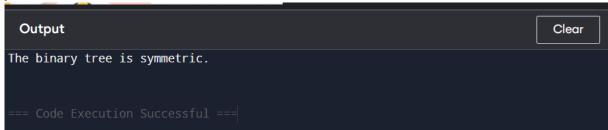

```
#include <iostream>
using namespace std;
struct TreeNode {
  int val;
  TreeNode* left;
  TreeNode* right;
  TreeNode(int x) : val(x), left(nullptr), right(nullptr) {}
};
bool isMirror(TreeNode* t1, TreeNode* t2) {
  if (!t1 && !t2) return true;
  if (!t1 || !t2) return false;
  return (t1->val == t2->val) &&
      isMirror(t1->left, t2->right) &&
      isMirror(t1->right, t2->left);
}
bool isSymmetric(TreeNode* root) {
  if (!root) return true;
  return isMirror(root->left, root->right);
}
TreeNode* createBinaryTree() {
  TreeNode* root = new TreeNode(1);
```

CU CHANDIGARH IMMIZERSTY

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

```
Discover. Learn. Empower.
  root->left = new TreeNode(2);
  root->right = new TreeNode(3);
  root->left->left = new TreeNode(4);
  root->left->right = new TreeNode(4);
  root->right->left = new TreeNode(4);
  root->right->right = new TreeNode(3);
  return root;
}

int main() {
    TreeNode* root = createBinaryTree();
    if (isSymmetric(root)) {
        cout << "The binary tree is symmetric." << endl;
    } else {
        cout << "The binary tree is not symmetric." << endl;
    }
    return 0;
}</pre>
```

3. Given the root of a binary tree, return the inorder traversal of its nodes' values

```
#include <iostream>
using namespace std;
struct TreeNode {
  int val;
  TreeNode* left;
  TreeNode* right;
  TreeNode(int x) : val(x), left(nullptr), right(nullptr) {}
};
void inorderTraversal(TreeNode* root) {
  if (root == nullptr) return;
  inorderTraversal(root->left);
  cout << root->val << " ";
  inorderTraversal(root->right);
int main() {
  TreeNode* root = new TreeNode(1);
  root->right = new TreeNode(2);
```

```
Discover. Learn. Empower.
root->right->left = new TreeNode(3);
inorderTraversal(root);
cout << endl;
return 0;

Output

Clear

1 3 2

=== Code Execution Successful ===
```

4. Given the root of a complete binary tree, return the number of the nodes in the tree.

```
#include <iostream>
#include <climits>
using namespace std;
struct TreeNode {
  int val;
  TreeNode* left;
  TreeNode* right;
  TreeNode(int x) : val(x), left(NULL), right(NULL) {}
};
int calculateDepth(TreeNode* node) {
  int depth = 0;
  while (node) {
     depth++;
    node = node->left;
  return depth;
}
bool exists(int index, TreeNode* root, int depth) {
  int left = 0, right = (1 << depth) - 1;
  TreeNode* current = root;
  while (left < right) {
    int mid = (left + right) / 2;
    if (index & (1 << mid)) {
       current = current->right;
       left = mid + 1;
     } else {
```

CU CHANDIGARH

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

```
Discover. Learn. Empower.
       current = current->left;
       right = mid;
     }
  }
  return current != nullptr;
int countNodes(TreeNode* root) {
  if (!root) return 0;
  int depth = calculateDepth(root);
  int left = 0, right = (1 << depth) - 1;
  while (left <= right) {
    int mid = (left + right) / 2;
    if (exists(mid, root, depth)) {
       left = mid + 1;
     } else {
       right = mid - 1;
     }
  }
  return (1 \ll depth) - 1 + left;
}
int main() {
  TreeNode* root = new TreeNode(1);
  root->left = new TreeNode(2);
  root->right = new TreeNode(3);
  root->left->left = new TreeNode(4);
  root->left->right = new TreeNode(5);
  root->right->left = new TreeNode(6);
  root->right->right = new TreeNode(7);
  int nodeCount = countNodes(root);
  cout << "Number of nodes in the complete binary tree: " << nodeCount << endl;
  return 0;
}
```

```
Output

Number of nodes in the complete binary tree: 7

=== Code Execution Successful ===
```

5. Given the root of a binary tree, you need to find the sum of all the node values in the binary tree.

```
#include <iostream>
#include <sstream>
using namespace std;
struct TreeNode {
  int val;
  TreeNode* left;
  TreeNode* right;
  TreeNode(int x) : val(x), left(nullptr), right(nullptr) {}
TreeNode* buildTree(const string& input, int& index) {
  if (index >= input.size() || input[index] == ',') {
    index++;
    return nullptr;
  }
  int num = 0;
  while (index < input.size() && input[index] != ',' && input[index] != ' ') {
    num = num * 10 + (input[index] - '0');
    index++;
  TreeNode* node = new TreeNode(num);
  node->left = buildTree(input, index);
  node->right = buildTree(input, index);
  return node;
int sumOfNodes(TreeNode* root) {
  if (!root) return 0;
  return root->val + sumOfNodes(root->left) + sumOfNodes(root->right);
int main() {
  string input;
  cout << "Enter the tree nodes (comma separated): ";</pre>
  getline(cin, input);
  int index = 0;
  TreeNode* root = buildTree(input, index);
  int sum = sumOfNodes(root);
  cout << "Sum of all nodes: " << sum << endl;
  return 0;
   Output
                                                                                       Clear
 Enter the tree nodes (comma separated): 1,2,3,4,5
 Sum of all nodes: 15
```

6. Given the root of a binary tree, invert the tree, and return its root.

```
#include <iostream>
#include <sstream>
using namespace std;
struct TreeNode {
  int val;
  TreeNode* left;
  TreeNode* right;
  TreeNode(int x) : val(x), left(nullptr), right(nullptr) {}
};
TreeNode* buildTree(const string& nodes, int& index) {
  if (index >= nodes.length() || nodes[index] == 'n') {
    index += 4;
    return nullptr;
  }
  int val = stoi(nodes.substr(index, nodes.find('', index) - index));
  index = nodes.find('', index) + 1;
  TreeNode* node = new TreeNode(val);
  if (index >= nodes.length()) {
    return node;
  }
  node->left = buildTree(nodes, index);
  if (index >= nodes.length()) {
     return node;
  }
  node->right = buildTree(nodes, index);
  return node;
TreeNode* invertTree(TreeNode* root) {
  if (!root) return nullptr;
  swap(root->left, root->right);
  invertTree(root->left);
  invertTree(root->right);
  return root;
}
void printTree(TreeNode* root) {
  if (!root) {
```

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

```
Discover. Learn. Empower.
     cout << "null ";</pre>
     return;
  }
  cout << root->val << " ";
  printTree(root->left);
  printTree(root->right);
int main() {
  cout << "Enter tree nodes separated by spaces: ";
  string input;
  getline(cin, input);
  int index = 0;
  TreeNode* root = buildTree(input, index);
  cout << "Original tree: ";</pre>
  printTree(root);
  cout << endl;
  TreeNode* invertedRoot = invertTree(root);
  cout << "Inverted tree: ";</pre>
  printTree(invertedRoot);
  cout << endl;
  return 0;
   Output
                                                                                       Clear
 Enter tree nodes separated by spaces: 1 2 3
 Original tree: 1 2 3 null null null null
 Inverted tree: 1 null 2 null 3 null null
```

7. Given a Binary Tree, the task is to count leaves in it. A node is a leaf node if both left and right child nodes of it are NULL.

```
#include <iostream>
#include <sstream>
using namespace std;

struct TreeNode {
  int val;
  TreeNode* left;
  TreeNode* right;
```

CUCHANDIGARH UNIVERSITY

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

TreeNode(int x): val(x), left(nullptr), right(nullptr) {};

```
TreeNode* buildTree(const string& nodes) {
  if (nodes.empty()) {
     return nullptr;
  istringstream iss(nodes);
  string token;
  iss >> token;
  int val = atoi(token.c_str());

   return 1;
 int numLeaves = countLeaves(root);
 cout << "Number of leaves: " << numLeaves << endl;</pre>
 deleteTree(root);
 return 0;
  Output
                                                                                            Clear
 Enter tree nodes separated by spaces: 1 2 3
 Number of leaves: 2
```

8. Given a binary tree and a sum, return true if the tree has a root-to-leaf path such that adding up all the values along the path equals the given sum. Return false if no such path can be found.

```
#include <iostream>
using namespace std;
struct TreeNode {
  int val:
  TreeNode *left;
  TreeNode *right;
  TreeNode(int x) : val(x), left(NULL), right(NULL) {}
};
class Solution {
public:
  bool hasPathSum(TreeNode* root, int sum) {
    if (!root) return false;
     return dfs(root, sum);
  }
  bool dfs(TreeNode* node, int sum) {
    if (!node) return false;
    if (!node->left && !node->right && node->val == sum) return true;
    return dfs(node->left, sum - node->val) || dfs(node->right, sum - node->val);
```

CHANDIGARH UNIVERSITY
